key measures for
heart attack care
and **4** out of **4**
key measures
for congestive
heart failure

Beats
90-minute
national
standard for
speed in
treating
heart attacks

The most important number is still one.

As the region's leading heart program, St. Mary has some very impressive numbers to show. But we never forget that the most important number of all is that one life we're saving right now.

"I was at St. Mary having a stress test...and that's the last thing I remember. The next thing I knew, I was waking up from major double-bypass heart surgery. The whole St. Mary team was super. The instant I passed out they started doing everything to save my life — they worked nonstop for 45 minutes. Then I was in surgery for 4 hours. The cardiac rehab team has me in such good shape that I can go to the gym again. And through the whole process, the cardiologist took time to explain it all.

"Now I'm back at work with no problems, even though my job on a loading dock is pretty physical. Plus I'm hunting, fishing, going to car shows, and playing with my little grandson. I would recommend St. Mary to anyone."

Kim Clymer
St. Mary heart patient

True story. True leader.
