key measures for
heart attack care
and **4** out of **4**
key measures
for congestive
heart failure

Beats
90-minute
national
standard for
speed in
treating
heart attacks

The most important number is still one.

As the region's leading heart program, St. Mary has some very impressive numbers to show. But we never forget that the most important number of all is that one life we're saving right now.

"Since I'm able to build relationships with patients over a long period of time, I can recognize when something's just not right. Recently, a patient I've known for years came in for a flu shot. She thought she had bronchitis, but I ran a cardiogram, which showed she actually was having a heart attack right in my office!

"We rushed her to the St. Mary Emergency Department where they immediately got her into the Cath Lab for a stent. That speed is what saves heart muscle — and lives. When I send someone to St. Mary, I trust they'll receive the most advanced care from specialists with many, many years of experience."

*Dr. Arlene Imber
Family Practice Physician*

True story. True leader.
