

Imagine ...

Highly sensitive technology targets tumors using high-dose radiation with pinpoint accuracy.

What is your cancer risk?

Some breast, ovarian, and colon cancers occur because of genetic factors passed from one generation to the next. If two or more members of your extended family have had cancer of any kind, please call about our Family Risk Evaluation Program at **215.710.4511**.

eliminating brain tumors painlessly, with *no surgery at all*.

A remarkable new cancer treatment offers patients an alternative to traditional surgery by pinpointing tumors so higher doses of radiation can be safely delivered. This next generation of cancer treatment is here today at St. Mary Regional Cancer Center.

Frameless stereotactic radiosurgery painlessly treats even inoperable tumors with powerful precision. Sophisticated technology also can detect slight patient movement so focused high-energy radiation can target cancerous cells without harming healthy tissue just a millimeter away. This less invasive way to fight cancer allows for more radiation in a single dose with fewer treatments than traditional radiation techniques.

St. Mary experts provide comprehensive cancer services, solving the most complex cases using advanced technology and treatments never before imagined. And behind every cutting-edge service we provide, you'll find our compassionate care. A far cry from the routine – but exactly what you'd expect from St. Mary.
